Wolfram Demonstrations are mathematical concepts that are written in a specialized format, a format devised by Wolfram, to enable a wide range of fascinating demonstrations to be produced using Mathematica. Examples include scientific formulas, visualizations, animations, utility functions, and interactive illustrations of all sorts. Demonstrations use many, but not all, of the powerful features of Mathematica. For example, in a very limited way, they can be executed in a traditional programming language (most often Mathematica or other Wolfram languages). Wolfram Demonstrations Mathematica and Wolfram Demonstrations are a collection of mathematical concepts that are written in a special format, a format devised by Wolfram, to enable demonstrations that show off many of the interesting capabilities of Mathematica. Many water sources that are used to water or irrigate crops, or to otherwise provide water for a variety of activities, contain unwanted particulates. Such particulates are usually in the form of silt and/or sand that have been swept into the water by wind or other natural forces. Any foreign material introduced into such a water source to water crops or to otherwise support the growth of plants may adversely affect the quality of the water. Several prior art filtering devices are known that provide for filtration of a water stream. For example,
