Development of a patch test system (PTS) with 1-chloroprene as provocative agent for keratin-sensitized patients. A patch test system (PTS) with 1-chloroprene (1-CIPA) as a provocative agent was developed to facilitate investigation of patients with skin disorders following contact with various chemical products. To evaluate the performance of the PTS, 1-CIPA was applied to the volar surface of the forearm of healthy subjects and to the volar surface of the forearm and the volar surface of the dorsal foot of the patients with contact dermatitis. To examine the time course of the skin reaction, the test was conducted with application at 15, 30, 60, 90, and 180 min after 1-CIPA application. Skin reactions were evaluated at 24 h, 48 h, 72 h and 96 h after 1-CIPA application. In both subjects and patients, 1-CIPA produced positive skin responses that were more notable at 24 h than at any other time. In a comparison of the skin reactions induced in normal subjects and patients, no significant differences were found between these two groups. The results of this preliminary study indicated that 1-CIPA is applicable to the PTS for the diagnosis of patients with keratin-sensitized contact dermatitis. Yasiel Puig would run out a weak grounder to the right side and it would lead to another run scored for the Dodgers. "If we could've kept the ball in the ballpark, they would've gotten it and it would have been a very tough one to overcome," Bumgarner said. "But that's the way the game goes." The Dodgers then put up a single run in the bottom of the ninth on Joc Pederson's sacrifice fly. "[Puig] played well," said Bumgarner. "He had a nice at-bat against Josh (Sexton). He played really well in a lot of different ways. He's a good player and he played a really good game." Posey was
