The Block Editor allows users to place and manipulate individual CAD blocks. These can then be repeated and reoriented in the drawing. This feature is achieved through the use of the LISP Programming Environment. Application Programming Interface AutoCAD supports a number of APIs for customization and automation. Visual LISP AutoCAD supports Visual LISP, a scripting language that is similar to macros. User command Autodesk introduced the concept of User Commands, a command that is not included in AutoCAD itself, but that may be installed by the user as a driver. User commands can be either stand-alone, or can be tied to the menus of the application. AutoLISP is not able to use the ObjectARX libraries that allow for user commands. For example, the command [OBJECTARX::Misc -toRotate CC] will rotate the selected object around the center of its bounding box. Other commands are: [OBJECTARX::Misc -nospace] and [OBJECTARX::Misc -spacer], which determine whether or not to create a spacer line or a non-spacer line to the top, bottom, left, or right of the object. VBA AutoCAD supports the use of VBA, which is Microsoft Visual Basic for Applications. This is a Microsoft Development environment that provides a more powerful scripting tool for AutoCAD. For example, it allows for the creation of macros for controlling the appearance and behavior of a graphic, such as changing its fill color, or moving it to a different location. af5dca3d97
