The author of the Recuva, Harry is a complex software developer who enjoys working on new and interesting uses of software. The deep scanning feature enables the Recuva to scan and recover even the deepest of folders and the file data from hard drives. Recuva also supports most re-writable media (including internal and external hard drives, iPods, memory cards, USB sticks, etc.). In most cases, the Recuva will recover most files with original names and dates. However, it depends on how the original file was renamed in its folder structure, so you may need to manually fix filenames and dates. Once the files are found, you can preview them, copy them, and or save them to a new folder. Recuva has an easy-to-use graphical user interface and works on Windows XP/7/8/10. The Recovery Process: 1. Scan your drive for files, folders, and sub-folders. 2. Preview the found files to save time. 3. Copy the recoverable files to a save place, or if it's an external drive, copy the files to that.
