
Wavemachine Labs Drumagog Platinum V511

the drumagog 5 synth includes two oscillators with a smooth attack and release. two amp envelopes are included: a classic section for the outer rim, and a classic section for the center. the center section provides perfect control for the midrange section of the drums, and the level of the two sections can be blended together to provide a wide range of dynamic control. like the other drumagog 5 units, the drumagog 5 synth is a true hi-fi instrument. as such, it's capable of very high levels of detail, even if it were modeled to the drum sounds. in addition to the amp envelopes noted above, there are also a wide range of controls for level, filter cutoff, resonance, and resonance level. the level, filter cutoff and resonance controls are provided as a set of three controls to give you the widest possible range of control over the drum sounds, and a visual indicator of the current settings. the drumagog 5 is a multifunction drum processor capable of replacing nearly all of the recorded drum hits in a song. drumagog 5 includes all the controls necessary for accurate placement and great sound quality. the tracking control is a powerful tool that works in conjunction with the morph engine, allowing you to replace all or only the louder hits, all the louder hits only, a random selection of hits, or only the louder hits with a minimum volume difference from the original. the stealth mode allows you to bypass the tracking section until the incoming audio reaches an adjustable threshold, allowing for a seamless transition between the original and the replacement. and the auto ducking allows you to keep the original recording while replacing only the louder parts.

Wavemachine Labs Drumagog Platinum V511

the drumagog 5 synth includes two oscillators with a smooth attack and release. two amp envelopes are included: a classic section for the outer rim, and a classic section for the center. the center section provides perfect control for the midrange section of the drums, and the level of the two

sections can be blended together to provide a wide range of dynamic control. like the other drumagog 5 units, the drumagog 5 synth is a true hi-fi instrument. as such, it's capable of very high levels of detail, even if it were modeled to the drum sounds. in addition to the amp envelopes noted above, there are also a wide range of controls for level, filter cutoff,

resonance, and resonance level. the level, filter cutoff and resonance controls are provided as a set of three controls to give you the widest possible range of control over the drum sounds, and a visual indicator of the current settings. the drumagog 5 is a multifunction drum processor capable of replacing nearly all of the recorded drum hits in a song. drumagog 5 includes

all the controls necessary for accurate placement and great sound quality. the tracking control is a powerful tool that works in conjunction with the morph engine, allowing you to replace all or only the louder hits, all the louder hits only, a random selection of hits, or only the louder hits with a minimum volume difference from the original. the stealth mode

allows you to bypass the tracking section until the incoming audio reaches an adjustable threshold, allowing for a seamless transition between the original and the replacement. and the auto ducking allows you to keep the original recording while replacing only the louder parts. 5ec8ef588b
