Enhanced recovery after surgery and antibiotic restriction reduce surgical site infections in gastrointestinal surgery. Surgical site infection (SSI) is the most common nosocomial infection in the hospital environment. This study investigated the effect of enhanced recovery after surgery (ERAS) and restrictions on the use of antibiotics on the occurrence of SSI. A prospective single-center randomized controlled study was performed with patients admitted for gastrointestinal surgery (abdominal surgery or colorectal surgery). During surgery, a sterile drape was positioned over the surgical field. The surgical drape, surgical drains, urinary catheter, and urinary stoma were removed on the first postoperative

day. Patients were randomly assigned to a standard ERAS group or a modified ERAS group. In the ERAS group, fluid restriction and use of a nasogastric tube were reduced. No restriction of the use of antibiotics was used in the ERAS group, but antibiotic prophylaxis was performed in the standard ERAS group. A total of 211 patients participated in the study. The rate of SSI was significantly lower in the ERAS group (5%) than in the standard ERAS group (21%) ($P = 0.001$). The incidence of surgical infections was significantly reduced in the ERAS group ($P = 0.002$). The incidence of urinary tract infections was lower in the ERAS group (7%) than in the standard ERAS group (13%). Colon surgery was the only factor that was identified as a predictor of SSI. ERAS is a valuable method for preventing SSI in gastrointestinal surgery.

Antibiotic restriction had an important impact on the occurrence of urinary tract infections and should be recommended.

Field of the Invention
The present invention relates to a content playback device, a content playback method, and a storage medium. **Description of the Related Art**
For example, a content playback device such as a

DVD-player has been known that adds personal information such as a tag of the content to be played back (content) to the content. By using the personal information, the personal information can be referred to during playback of the content (see, for example, Japanese Patent Application Laid-Open No. 2006-227868). The personal information is not always a tag of a play list of the content, but it may be a tag of an episode, character, or any other play list. Further
